

E-Commerce Website Enhancement Task

Carefully review the entire e-commerce website, especially the Hero Section and Home Products Section.

Objective

The website currently contains placeholder/demo product data and images. Most of the dummy data can remain as it is, but the Hero Section and Home Page product showcases should look like a real production-ready e-commerce store.

Hero Section Changes

The Hero Section currently contains slider/carousel banners with placeholder images and content.

Update the Hero Section as follows:

- Replace all placeholder/demo images with high-quality real product images.
- Use professional e-commerce style banners.
- Show products from different categories such as:
 - Electronics
 - Fashion
 - Furniture
 - Home & Living
 - Beauty & Personal Care
 - Accessories

For each slide:

- Use a realistic product title.
- Add a realistic product tagline.
- Add a realistic discount offer or promotion.
- Use professional call-to-action buttons such as:
 - Shop Now
 - Explore Collection
 - View Deals

The Hero Section should immediately give users the impression that this is a real and active e-commerce marketplace.

Home Page Product Cards

The product cards displayed on the Home Page currently use:

- Dummy product names
- Dummy product descriptions
- Placeholder images

Update them as follows:

- Replace product images with real product images.
- Replace titles with realistic product names.
- Replace descriptions with realistic product information.
- Keep the existing UI layout unchanged.
- Keep the existing card design unchanged.
- Keep existing functionality unchanged.

Examples:

- Modern Wooden Dining Table
- Wireless Bluetooth Headphones
- Smart Fitness Watch
- Ergonomic Office Chair
- Premium Leather Backpack
- Luxury Bedside Lamp

Important

Do NOT redesign the website.

Do NOT change:

- Layout
- Color scheme
- Navigation
- Product detail pages
- Existing functionality
- Dummy data used elsewhere in the application

Only improve the Hero Section and Home Page showcase content so that the website appears like a real e-commerce platform with authentic products, images, and promotional content.

Expected Result

When a user lands on the website:

- The Hero Section should look like a professional marketplace banner.
- The Home Page product showcases should display realistic products.
- The website should feel production-ready and trustworthy.
- Existing design and functionality should remain intact.
